SUMMARY

Analytics Engineer with 4+ years of experience building data models, transformation pipelines, semantic layers, and analytics infrastructure for digital products. Experienced partnering with product and business teams to develop reliable, scalable data solutions across the data lifecycle.

PROFESSIONAL EXPERIENCE

Analytics Engineer, BookBub 🌐

2025 – Present
Cambridge, MA

- Expanded ownership of BookBub's data infrastructure to include data engineering responsibilities.
- Contributes to production data pipelines, developing and maintaining transformations which include materialized views and Airflow DAG workflows, plus work on logging and retries.
- Ingests new data sources from affiliate APIs or internal platform components.

Data Analyst, BookBub

2023 – 2025
Cambridge, MA

- Owns analytics for BookBub's digital product suite as part of a two-person analytics team, partnering with product, engineering, and business leads to deliver data solutions for multiplatform experiences reaching 32M+ users annually.
- Administers the enterprise Looker instance, developing and maintaining LookML models and explores with standardized metric definitions and semantic-layer logic to enable scalable self-service analytics.
- Owned the BookBub application relaunch, which involved designing the underlying data model, defining measurement frameworks, performing experience testing, and building reporting infrastructure to measure post-rollout performance and adoption.

Spatial Data Analyst, City of Boston, Department of Innovation and Technology 🌐

2022 – 2023
Boston, MA

SKILLS

Languages: Python, SQL, bash, R, Jinja (for dbt), Git, D3.js

Tools: BI Tools (Looker), AWS, Airflow, Cloud Data Platforms, Snowflake, PostgreSQL, Relational Databases, Docker, ArcGIS Pro, Claude Code

Skills: Data Pipelines, ETL/ELT, Data Modeling, Data Transformation, Workflow Orchestration, Materialized Views, Data Quality Testing, Semantic Layers, Analytics Engineering, Metrics Modeling, Business Intelligence, Data Visualization, Agile Methodologies

PROJECTS

Looker Lineage 🌐, Winner of "Best Hack" at Looker's Annual Hackathon 2024

Dec 2024

Led the development of a tool which leverages Looker's existing API to surface repeatedly defined fields across any whole Looker instance, enabling Looker users to better size the potential impact of non-breaking, upstream changes that were previously untraceable.

Citywide Land Audit 🌐, Policy Initiative of Mayor Wu for the City of Boston

Jul 2022

Owned the development of the first-ever combined dataset of all City-owned, leased, or operated parcel properties. Involved pipeline development coalescing data from many disparate City departments, plus the development of a publicly-available data explorer application. Still in use today. See here: <https://www.boston.gov/departments/housing/citywide-land-audit> 🌐

EDUCATION

B.S. Geographic Information Systems (GIS) with Honors, Northeastern University

Boston, MA

Activities: Biostatistics Peer Tutor (helping students with statistical programming fundamentals for experiments and class assignments), Annual HEIST Workshop Presenter on the topic of "Introduction to Statistical Programming in R/RStudio"
